Embedding ICT @ Secondary

Use of interactive whiteboards in physical education

department for education and skills
creating opportunity, releasing potential, achieving excellence

Key Stage 3 National Strategy

Becta
British Educational Communications and Technology Agency
Section 1: Getting started

1.1 Introduction

Your interactive whiteboard has arrived in your classroom. You have had some technical training from the whiteboard's suppliers and you are ready to go. This booklet aims to help you take the first steps in using the whiteboard to support your teaching of physical education. You should find enough support here to get started, after which, we hope, you will soon find using the whiteboard both easy and exciting.

‘I was really excited when I first realised I was getting an interactive whiteboard in my classroom. However, it was rather a challenge quite knowing where to start. The company that sold the whiteboard gave us some really motivating training and I became very excited about the possibilities, but I still wanted some further support to use it effectively in lessons to improve my teaching.

‘For the first few weeks I just used it in the same way as my old whiteboard – for writing on in handwriting. But I knew that I could save what I had written and I slowly started to revisit work we had already done. I could see that I could do so much more with the interactive whiteboard. A group of us who had the boards met and the people who had had them longest talked about them and demonstrated what they could do. This made me much more confident about trying different things.

‘I started to add pictures and text and found some great resources online. I also started to use some CD-ROMs that we had in the department and in the library. I am feeling my way gradually and I can see the long-term benefits in using this technology.’
1.2 What is an interactive whiteboard?

An interactive whiteboard is simply a surface onto which a computer screen can be displayed, via a projector. It is touch-sensitive and lets you use a pen on it (or in some cases, a finger) to act like a mouse, controlling the computer from the board itself. Changes made to information projected onto the whiteboard are transferred to the computer and can be saved and retrieved in future lessons. Everything that can be displayed on a computer can be projected onto the whiteboard and, if the computer is linked to speakers and a DVD or video player, multimedia resources can be incorporated too. If the board is connected to the Internet, teachers can have immediate access to appropriate websites to enhance work in the lesson.

There are two main types of interactive whiteboard. Hard boards have a hard magnetic surface behind the screen and need special pens to write on them. Soft boards have a tough membrane on the surface which can be written on with a finger or a special pen. Most interactive whiteboards are supplied with specific software tools to exploit the potential of the board.
The basics
The best way to understand how a whiteboard works is simply to find one and to have a try. You will find that it is easy to control the computer from the board itself. The most important point to understand is that anything that works on the computer will work on the interactive whiteboard too.

Certain items of equipment are needed to use the different features of interactive whiteboards.

- **Essential pieces of equipment are:**
  - the interactive whiteboard and supplied software, computer and data projector.

- **You should also consider:**
  - additional software, speakers, multimedia, remote input devices such as a keyboard, gyromouse or voting devices.

Other issues that need to be taken into account are:

- Installation
- Maintenance/warranty
- Security
- Networking to the school network and the Internet

It is important to remember that there are likely to be additional costs that need to be allowed for when using an interactive whiteboard. For example, replacement projector bulbs are also needed. These are expensive but do last a long time.

For further advice on these issues and procurement visit [www.whiteboards.becta.org.uk](http://www.whiteboards.becta.org.uk)

---

“When we first looked into getting an interactive whiteboard for our department, we realised that we needed to take into account not just the costs of the board itself, but also the cost of the computer, the projector, speakers and training for staff. We were also really keen to be linked to the Internet but the classroom we wanted to use wasn’t wired up for that, so it took a few months to sort out.

“It all seemed to be going well until the bulb in the projector blew. We didn’t have any in stock and one had to be ordered. It took a couple of weeks to arrive and it was quite expensive. Those of us who had become used to using the whiteboard felt lost without it.”
Interactive whiteboards have the potential to improve teaching and learning in a variety of ways. In this section, we will focus on three key areas:

1. **Presentation, demonstration and modelling**
   How the use of appropriate software and resources in combination with the interactive whiteboard can improve understanding of new concepts.

2. **Actively engaging pupils**
   How pupils’ motivation and involvement in a lesson can be increased through the use of the interactive whiteboard.

3. **Improving the pace and flow of lessons**
   How the use of an interactive whiteboard can improve planning, pace and flow in lessons.

### 2.1 Presentation, demonstration and modelling

An interactive whiteboard is a valuable tool for whole-class teaching. It is an outstanding visual resource that can help teachers to present lessons in lively and engaging ways. It allows information to be presented using a wide range of resources, which can then be annotated by teachers and pupils to clarify and refine understanding. It can facilitate explanations of models by both teachers and pupils and contribute to an understanding of what happens to a model if a variable or rule is altered.

Teachers can use the board to demonstrate and present ideas in exciting and dynamic ways. The boards also allow pupils to interact with the new learning that is being demonstrated, as well as providing a valuable tool for teachers to model abstract ideas and concepts. Teachers can change what they put on the board easily, or move an object to a different place, making new connections. They will be thinking aloud as they carry out the process, making what they are doing transparent to pupils. They will gradually involve pupils, who can then add their own ideas to the board.
2.2 Active engagement

Evidence suggests that the interactive whiteboard ‘increases enjoyment of lessons for both students and teachers through more varied and dynamic use of resources, with associated gains in motivation’ (Levy 2002).

The careful use of a whiteboard can support teachers in effective questioning. Well-judged questioning, which is aimed at pupils refining their ideas and posing new questions, helps them to deepen their understanding of the concept or idea.

It can provide a focus and impetus to class discussions managed by the teacher and give stimulus to small group work. The whiteboard provides an engaging focal point in the classroom. It also supports a good pace in teaching, as all the resources are prepared in advance of the lesson and are instantly available.

2.3 Improving the pace and flow of lessons

The use of interactive whiteboards allows for the creative and seamless use of materials, as lessons or topics can be structured around a single file. Files or pages can be prepared in advance and used to link to other resources deployed in the lesson. Teachers say that preparing lessons around a single file helps with planning and assists the flow of the lesson. It also allows for reflection after the lesson.

‘It is very useful as a means of planning on the basis of past teaching and, following review with colleagues, we can share, adapt and develop according to needs’ (teacher quoted in Glover and Miller 2001).

Objects and text can be moved around easily using the whiteboard, diagrams labelled, text, pictures and diagrams annotated, key areas highlighted and colour added. In addition, sections of text, pictures or diagrams can be concealed then revealed at key points during the lesson. This is done with teachers or pupils at the front of the room and becomes the focal point of the class’ attention.

Pre-preparing text, charts, diagrams, pictures, music, maps, subject-specific CD-ROMs as well as including hyperlinks to multimedia files and the Internet can give lessons a crisp pace, as no time is wasted writing on the board or moving between keyboard and screen. These pre-prepared resources can be annotated on screen if required, using the handwriting tool, and saved for future use. Files from previous lessons can then be recalled to help with reinforcing previous learning.

These strategies can also engender a greater sense of involvement and engagement in the lesson in the pupils. The work they do on the board can be saved and referred to later. Flip charts or pages can be stored at the side of the board as thumbnails and the teacher can move backwards to an earlier section, if need be, to reinforce learning for the whole class or a small group. Pupils who are unclear about what has been taught can refer back to teaching points from earlier parts of the lesson.
2.4 What the research says

These benefits of whiteboard use have been highlighted in Becta's publication, *Getting the Most from Your Interactive Whiteboard: A Guide for Secondary Schools*

**General benefits**
- versatility, with applications for all ages across the curriculum (*Smith A 1999*)
- increases teaching time by allowing teachers to present web-based and other resources more efficiently (*Walker 2003*)
- more opportunities for interaction and discussion in the classroom, especially compared to other ICT (*Gerard et al 1999*)
- increases enjoyment of lessons for both students and teachers through more varied and dynamic use of resources, with associated gains in motivation (*Levy 2002*).

**Benefits for students**
- increases enjoyment and motivation
- greater opportunities for participation and collaboration, developing students’ personal and social skills (*Levy 2002*)
- reduces the need for note-taking through the capacity to save and print what appears on the board
- students are able to cope with more complex concepts as a result of clearer, more efficient and more dynamic presentation (*Smith H 2001*)
- different learning styles can be accommodated as teachers can call on a variety of resources to suit particular needs (*Bell 2002*)
- enables students to be more creative in presentations to their classmates, increasing self-confidence (*Levy 2002*)
- students do not have to use a keyboard to engage with the technology, increasing access for younger children and students with disabilities (*Goodison 2002*).

**Factors for effective use**
- sufficient access to whiteboards so teachers are able to gain confidence and embed their use in their teaching (*Levy 2002*)
- use of whiteboards by students as well as teachers (*Kennewell 2001*)
- provision of training appropriate to the individual needs of teacher (*Levy 2002*)
- investment of time by teachers to become confident users and build up a range of resources to use in their teaching (*Glover & Miller 2001*)
- sharing of ideas and resources among teachers (*Levy 2002*)
- positioning the whiteboards in the classroom to avoid sunlight and obstructions between the projector and the board (*Smith H 2001*)
- a high level of reliability and technical support to minimise problems when they occur (*Levy 2002*).
3.1 Planning to teach with an interactive whiteboard

Interactive whiteboards offer far greater potential for teaching than simply being used as electronic chalkboards. They can also enhance lessons more than a data projector and a computer used on their own. Using an interactive whiteboard to its full potential requires planning, and this will take time. However, lessons created for the whiteboard can be used again, with or without adaptations, which actually saves time in the long run. Whiteboards also allow for lessons to be improved and refined based on practice, and they are likely to benefit by being carefully structured to take full advantage of the whiteboard technology.

Interactive whiteboards offer a wide range of advantages in the teaching of all subjects. Many teachers say whiteboards have led them to plan collaboratively with other members of their departments, which has had the effect not only of saving time but also of improving the overall quality of what is produced.

Teachers interviewed also say that they feel their planning has improved because of the way the interactive whiteboard software allows them to structure their lessons before they teach them. The fact that lessons can be saved, complete with notes, and then easily altered, allows for improvement and refinement before the topic is taught again. Teachers can also create libraries of resources which build up as they use the whiteboard.

The range of content available for use with the whiteboard means that students sometimes grasp new ideas and concepts more quickly. This is partly due to the visual nature of the presentation, and partly because whiteboards offer ways of actively engaging pupils in activities. Teachers who have been using the boards for some time feel that the quality of some of their lessons has improved too.

It is not possible to say categorically that pupils' results will improve through the use of interactive whiteboards, but many teachers using them note that pupils are more engaged, more interested and more motivated. They discuss topics more and they seem to remember things better.
It is important to realise that using an interactive whiteboard on its own will not provide any magic solutions to problems. Nor should teachers feel obliged to use the whiteboard in every part of a lesson, or indeed in every lesson. Sometimes the whiteboard might only be used for a starter or a plenary. As with any resource, its use will have most impact when it is used appropriately to enhance teaching and learning.

Teachers need to understand the generic software that comes with the whiteboard and its potential for helping them to create curriculum resources. They also need to identify subject-specific resources that can enhance the work they are doing on the whiteboard; eLCs (eLearning Credits) are likely to be available to help them purchase these resources where necessary.

In summary, using an interactive whiteboard has the following advantages:

- The lesson can be pre-prepared, which can contribute to a brisker pace and more time for meaningful discussion.
- Links can be created from one file to another – for example, to a sound or video file or an Internet page. This saves time looking for another resource and keeps the lesson flowing smoothly. It allows for the integration of a variety of media, facilitating audio and visual tasks. This is particularly important in languages, where teachers are very aware of the value of pupils being able to see and hear language simultaneously.
- Structuring the presentation of new material around a series of pages demands a logical step-by-step approach that can enhance and enrich lesson planning.
- Files can be saved to the school network at the end of a lesson for pupils to access later. The files can be saved in their original format or as they appear at the end of the lesson, complete with annotations and final tasks. These can be a useful reference point for both teacher and pupils, to be drawn upon later for revision purposes.

3.2 Using software tools

In the introduction, we mention that an interactive whiteboard is, in part, a display board for your computer. This means that all the resources which are on your computer can be displayed on the interactive whiteboard.

This gives you the scope to use resources such as:

- Presentation software
- Word-processing software
- CD-ROMs
- The Internet
- Image files (e.g. photographs, drawings, diagrams, screenshots)
• Movie files (e.g., sections of video from television programs, VHS video cassettes or files from a digital movie camera)
• Links to sound files (such as sections from cassettes or radio or recorded by a pupil or member of the teaching staff). Any sound included in a CD-ROM or Internet page will also play, providing that speakers are attached.
• Whiteboard software, which has the additional advantage over presentation software that items can be moved on the screen.
• Subject-specific software.

It is probable that lessons will involve a variety of these resources and that the teacher will pick and choose from what is available. Many of the resources listed above will take advantage of the features available on a computer, e.g., colour, movement and sound, all of which are more difficult (but not impossible) to achieve in a traditional lesson.

It is probably the ease with which such features can be deployed that makes pupils say that the resources used on an interactive whiteboard are generally more ‘exciting’ than those used in ‘traditional’ lessons. However, teachers do often have to search around to find appropriate resources. Look at the Further links and references section of this publication for some ideas to help with finding suitable materials.

In addition, most interactive whiteboards come with a useful range of generic functions which are likely to include some of the following:

<table>
<thead>
<tr>
<th>Whiteboard function</th>
<th>Contribution to teaching and learning</th>
</tr>
</thead>
<tbody>
<tr>
<td>Colour</td>
<td>The range of colours available on an interactive whiteboard allows teachers to use colour to indicate important areas for focus, to link similar ideas or to differentiate between ideas, or to demonstrate a process using colour. Examples of this might be a chloropleth map in geography or a diagram of the digestive system in biology.</td>
</tr>
<tr>
<td>Annotations on the screen</td>
<td>These are useful for modelling thinking and for adding information, questions and ideas to text, diagrams or pictures on screen. Annotations can be saved, referred to again or printed off for pupils to use.</td>
</tr>
<tr>
<td>Inclusion of sound and video clips</td>
<td>This can significantly enhance learning in a lesson. The technology also allows screens from video clips to be captured and displayed as still images for discussion and annotation.</td>
</tr>
<tr>
<td>Drag and drop</td>
<td>This helps pupils to group concepts, identify advantages and disadvantages, identify similarities and differences, and label maps, pictures, diagrams, equipment for an experiment and much more.</td>
</tr>
<tr>
<td>Highlighting specific elements of the whiteboard display</td>
<td>Text, diagrams and pictures can be highlighted on the whiteboard, allowing teachers and pupils to focus on particular aspects of the display. It is often possible to cover part of the display and reveal it only when needed. This can be helpful when pupils are being expected to focus on just a part of a text or a picture. Some interactive whiteboard software includes shapes that can also be used to help pupils focus on a particular area. Sometimes, there is a spotlight facility which teachers and pupils can use to select and focus on a particular aspect of the lesson.</td>
</tr>
</tbody>
</table>
These features can add significant value to teaching with an interactive whiteboard. For example:

- Using the drag and drop feature
- Using annotation and highlighting

### Using the drag and drop feature

When using an interactive whiteboard, any item on the board can be moved to another position, using a technique called ‘drag and drop’. This enables text or pictures to be moved anywhere on the board by pressing down on the item to be moved, holding it down and moving it, then releasing the pressure where you want it to stop – rather like moving a coin across the surface of a table. Using traditional methods, the same effect could be created by writing words on card or cutting out pictures and then sticking them to a board. However, doing this on a computer is much less time-consuming, easier to manage and reduces the need to store paper-based resources.

<table>
<thead>
<tr>
<th>Feature</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cut and paste</td>
<td>Sections can be cut and erased on screen, copied and pasted, undone and redone. These features help give pupils the confidence to take risks, as they know they can always go back or make changes.</td>
</tr>
<tr>
<td>Flip chart pages</td>
<td>These pages can be turned backwards and forwards, allowing teachers to go over particular aspects of a lesson or to recap areas that some or all of the pupils may not have understood. Pages can be viewed in any order and images and text can be dragged from one page to another. It may also be possible to make a link between pages, so that a teacher can move between a general statement and a more detailed analysis.</td>
</tr>
<tr>
<td>Split screen</td>
<td>Teachers can split the screen and display two different sets of things at once. This can be useful when exploring what happens if particular changes are made.</td>
</tr>
<tr>
<td>Rotate objects</td>
<td>This allows objects to be moved so that pupils can see symmetry, rotation and reflection.</td>
</tr>
<tr>
<td>Linking a digital microscope to the screen</td>
<td>This can provide a greatly enhanced experience when it comes to examining and discussing microscopic images.</td>
</tr>
</tbody>
</table>
where errors are permanent. There can also be a discussion based around what is on the interactive whiteboard. Using careful questioning, teachers can encourage pupils to explain their actions, thereby demonstrating their understanding and sharing their knowledge with the rest of the class.

Tasks using drag and drop are ideal for starters as they can be used to gain focus in the classroom. They can also act as revision from a previous lesson or a lead-in to the current lesson.

Drag and drop activities can also be useful during the main part of the lesson or plenary sessions, consolidating knowledge and applying the new knowledge and skills to other topic areas or providing a focus for extension.

Using annotation and highlighting

With an interactive whiteboard, all the materials that can be accessed through a computer can be used in lessons, including charts, diagrams, animations, sound and video. The variety of materials enables a greater selection of teaching strategies and activities to be used and for a wider range of learning skills to be addressed.

When working at the interactive whiteboard, it is possible to take a pen and make notes, add comments, circle, underline or highlight anything that is on the board. How this is done depends on the type of board being used, but the key teaching advantage is that the interactive whiteboard can prompt greater discussion in the classroom, when supported by probing questions by the teacher. Of course, it is possible to underline and add notes on a traditional board. The advantages of using an interactive whiteboard are that:

- The notes are added to pages that have been prepared before the lesson.
- The notes can be kept once the lesson is finished, rather than erased.
- Different colours can be used as well as items such as a highlighter, which could only be achieved using an OHP slide with traditional methods.

The flexibility of the whiteboard for this type of activity provides greater engagement for pupils, especially kinaesthetic learners.

Notes and comments can be added over the top of anything that is displayed on the screen and then the notes can be saved within the file. This means that pupils can access the file later or pages can be printed for the pupils’ notes. This technique can be adapted to a variety of tasks – any task that involves sorting, matching, grouping or ordering items can be done effectively on the interactive whiteboard.
The teaching and learning strategies you need to use when teaching with interactive whiteboards will not be unfamiliar. The features that make for successful lessons are the same, regardless of the technology or equipment you use. Successful lessons are well-designed and well-structured. They have clear learning objectives and outcomes and are broken into teaching episodes. This structure helps pupils to understand the content of the lesson and to relate it to what they already know.

The Key Stage 3 Strategy publication *Pedagogy and Practice: Teaching and Learning in Secondary Schools* sets out the characteristics of the teaching episodes in a typical lesson. These include:

- A starter activity.
- An introduction outlining the purpose and objectives of the lesson.
- The introduction of new learning or the introduction of a task. Typically, this will be the main area of whole-class teaching and may be repeated at different points of the lesson.
- The development of the learning by pupils.
- Plenaries at the end or during the lesson, providing opportunities to review what has been learned and reflect on the learning process.

The lesson structure is the same, whether or not an interactive whiteboard is used. Some aspects of lessons, however, can be enhanced by the boards. For example, the interactive whiteboard is particularly useful when using a style known as inductive teaching, in which pupils are expected to reach hypotheses based on sorting, classifying and re-sorting information.

The teacher can model different ways in which information might be classified using the features of the board, such as moving objects, and using colour and highlighting, while bringing pupils into the process. Pupils can
then work in small groups away from the board, taking the classification process further. They can be drawn back to the board at intervals so that different groups can present their thinking to the class for discussion, before continuing with the task.

The following section shows the phases in a typical lesson and looks at the contribution that an interactive whiteboard can make to each phase. However, this contribution ultimately depends on the materials used and how teachers exploit them, as well as how they interact with the pupils. The role of the teacher is still central in an effective lesson. The appropriate use of an interactive whiteboard can significantly support effective teaching.

The case studies give some examples of how interactive whiteboards could be used in physical education to enhance learning and teaching during the different episodes of a lesson. Remember that these are only examples and that interactive whiteboards offer many more possibilities than suggested here.

4.1 Using an interactive whiteboard for a starter activity

Teachers can use the dynamic nature of interactive whiteboards in a lively and engaging way in starter activities. Pupils can be set challenges using the board and can write their ideas on it. Teachers can also call up aspects of previous lessons to check pupils’ recall.

Case study 1

Pupils in Year 7 are learning about positions in netball, having played the game for half a term (most pupils will have experience from primary schools so this activity can usually be done from the very start of Year 7). The teacher decides to build on these ideas in a starter activity that involves the pupils placing the positions on the court for the start of the game using the interactive whiteboard, and sets up a file for the lesson to enable them to do so.

The teacher chooses a pupil to come up to the board and drag and drop the positions into place. This leads to a whole-class discussion, which results in some positions being moved. Pupils then work in pairs to work out where the opposition players would be and draw their positions on paper. A pupil is then chosen to come up to the board and fill in the opposition positions. This can be done by another drag-and-drop list or by using the pens provided with the board.

This activity can lead to questions about which players are allowed in which areas and where the ball can be thrown to from various places on the court, giving pupils a better understanding of the game. The teacher can annotate and save work for pupils.

This type of activity could be adapted to work with any year group and any sport.

Netball Positions: GK  WA  GD C  GS  WD GA
Case study 2

A teacher is introducing a GCSE group to the topic of Social and cultural aspects – social/antisocial behaviour of fans/supporters. Using an interactive whiteboard allows a range of visual resources to be presented and exploited. Here are some examples of possible starter activities that might be used to do this.

Example 1
Use of photographs
Pupils studying GCSE PE have been looking at sports etiquette in the previous lesson. They have considered what it is and have examined the unwritten rules, such as the shaking of hands and kicking the ball out of play when there is an injured player on the pitch. This leads to looking at player conduct and violence among players.

The teacher displays this picture and asks whether it shows a fair challenge. Pupils are asked to come up with answers and reasons for their answers, which are collected around the picture in handwritten annotation. Pupils are asked to discuss the conduct of players and sportsmanship on the field.

The lesson continues with a look at the rugby incident in 2002 where Martin Johnson (Leicester) was given a three-week ban for punching Robbie Russell (Saracens), resulting in a ban that forced Johnson to miss the Six Nations clash against Wales. Pupils are asked to discuss this in groups and produce a list of what is and is not acceptable on the field of play, and the consequences of foul play on the players and the game.

This then leads on to pupils looking at etiquette in a variety of sports, using images and source material stored in the shared area.

This type of activity could also work well using the spotlight facility built into the whiteboard software to reveal parts of the picture to try to ascertain what the mood is, what is happening, who is responsible etc.

Example 2
Use of text
In a previous lesson pupils studying GCSE PE have started looking at the role of spectators. They have seen that spectators cheer, add atmosphere and increase club funds through ticket sales and merchandising. They have also considered the fact that, without spectators, there would be no television coverage and therefore less sponsorship, which would lead to clubs having limited funds to purchase players and so on.

So far, pupils have looked at the spectator in a positive role in relation to the game. This lesson will introduce some of the negative aspects of spectators’ behaviour – for example, violence towards the players and other spectators.

Using the whiteboard, pupils are shown text from a recent newspaper report about football spectators. They are given five minutes to read it and then in groups to come to the board and write down the negative effects that this incident has had on the game of football, the clubs involved and on wider society. Pupils’ annotation could be saved and used at a later date, as well as printed for their notes. This activity would then lead to further work on the syllabus around...
spectator violence, going on to looking at legislation as a result of the Heysal Stadium disaster, the Hillsborough disaster and the resulting Taylor Report.

Football hooligans leave trail of havoc
Oct 24 2004
By Paul Marston, Sunday Mercury

This activity could have been done without an interactive whiteboard, as text could have been placed on acetate on an overhead projector or projected with a data projector. However, the interactive whiteboard allows greater flexibility, as annotations can be added and saved. It also enables pupils to be involved in the lesson more directly as they are annotating and adding to the text on the board.

Example 3
Use of a video clip to enhance understanding

The teacher has a video clip showing spectator violence after a football match. The video is paused at key sections for discussion and these are then annotated with questions and comments.

All the above starters could be achieved with traditional methods. The photographs could be shown on an overhead projector – although coloured overhead projector slides can be costly to produce. The video could be played on a VHS video player. However, there are advantages for the pupils and the teacher in using an interactive whiteboard. Firstly, the teacher can sequence the materials within one file, adding hyperlinks to other resources, such as sound or video files. These can be easily controlled at the board, replaying short sections if required. Any annotations added to the file can be saved for pupils to access later. Finally, pupils have said that the range of materials used is ‘more interesting than just using books’. They feel more able to engage with a multimedia approach and this helps to increase discussion and participation in the lesson.

4.2 Using an interactive whiteboard for the:
• Introduction of new learning;
• Development of the learning by pupils.

Interactive whiteboards are useful for introducing new learning and developing learning in that they allow teachers to collect all the resources they need on their computer. This means that teachers can structure lessons carefully in advance, ensuring a smooth flow and maintaining a good pace.

Interactive whiteboards can make an important contribution to the presentation of new information, modelling new concepts and processes, creating simulations, stimulating discussion and explaining new ideas.

Once pupils have begun to learn new ideas, it is useful if they can practise their knowledge or apply the new concepts to a different context. This may be a time to discuss what they have learned or allow them to consolidate learning before moving on, and can be done away from the board.

Case study 3

Pupils in Year 9 are working on Knowledge and understanding of fitness and health, from the QCA...
scheme of work for PE. One of the areas that the teacher wants to investigate with the pupils is the effect of exercise on heart rate. Pupils use heart and pulse rate monitors to collect, analyse and interpret data at the start of a fitness programme and then six weeks later.

The teacher begins to annotate the graphs with questions and statements. While she does this she thinks aloud, changing her mind about what she will do and making the reasoning behind the changes transparent. As she does this she gradually brings pupils into the process, requesting that they add to the screen and asking questions to help them to make their thinking and reasoning transparent.

When the teacher is sure that pupils understand what they are doing, they go in pairs to the computers and work on their own graphs using call outs to annotate their work.

At the end of the lesson, the teacher selects a few groups to display their results and explain what they have done and the reasoning behind it.

In this lesson the use of an interactive whiteboard has allowed the teacher to model the learning she wanted to take place in the lesson and also save the annotated screen for future use.

Case study 4

In both Key Stage 3 and GCSE PE, tactical play is an important development, but it is difficult to apply on the field/court if the pupils do not understand the reasons for it. The interactive whiteboard allows the teacher to move players around the pitch easily in many different formations, showing pupils what they should do during a game. The formations that are created can easily be stored and printed off for pupils or saved for future use.

GCSE PE requires pupils to 'perform effectively in the full recognised event/version of the game by selecting and applying skills, tactics, compositional ideas; understand, observe and apply rules, conventions, scoring systems, and safety aspects of participation and competition' (AQA Physical Education 2006 Specification A).

In this example, the teacher is explaining how a 16-yard hit out could work in a game of hockey. It is a key area of the pitch and should be where you start your attack (not start to defend if you give the ball to the opposing attack).

16-yard hit outs
The teacher moves the relevant players onto the pitch and, through discussion with the pupils, moves them around to suit the game. The teacher can then model one way of playing the ball out of defence and to the right forward in three passes.
The teacher can annotate what he has done and save it for pupils to use later. When he is happy that the pupils understand what he has done, they can use paper or computers to look at other ways of playing the ball out of defence on a 16-yard hit out. Pupils are then invited to the board to share their ideas and these are discussed and modified. Each solution can be saved, annotated and printed off for pupils. This activity can be adapted for any sport and for any tactic.

4.3 Using interactive whiteboards in the plenary session

Interactive whiteboards can contribute hugely to plenaries. Pupils can use the boards to present some of their ideas to the rest of the class for discussion, encouraging them to review and reflect on what they have learned. Learning can be reinforced with games and quick quizzes, and the interactive whiteboard can also be used to point pupils to extension activities, such as websites related to the topic.

Case study 5

Example 1
The skeletal system:
GCSE PE AQA Physical Education 2006 Specification A (3581) states that knowledge of the main bones is limited to:

- clavicle
- scapula
- humerus
- radius/ulna
- sternum
- ribs
- pelvis
- femur
- tibia/fibula
- patella

The pupils have been learning about the different bones in the body for GCSE PE. The teacher puts up a picture of a skeleton on the whiteboard that has the labels covered up. She chooses pupils to name a bone and then uncover it. This continues until all the bones are uncovered. This worksheet can then be given to pupils for their files.

Example 2
The same activity can be completed with the naming of muscles. The PE syllabus states pupils must know:

- biceps
- triceps
- deltoids
- pectorals
- trapezius
- abdominals
- latissimus dorsi
• gluteals
• quadriceps
• hamstrings
• gastrocnemius

Pupils are given thinking time during which they work in small groups to decide which training methods can be used to improve performance in each of the sports. The teacher can decide whether they can refer back to their notes.

Example 3
In this lesson, a class has finished working through the majority of the Year 10 Unit on training methods. Pupils have already looked at the key factors involved in training methods and at which ones are used/suitable for different types of activities.

They have studied the effects on the body, and the advantages and disadvantages, of:

• weight training
• circuit training
• interval training
• Fartlek training
• continuous training
• aerobic/anaerobic and altitude training.

In a subsequent lesson, pupils will be asked to structure a piece of work that summarises the key points. The teacher has planned this plenary to help them reflect on what they have learned and to prepare for the next task.

On the interactive whiteboard, the teacher opens a file and displays the screen shown, which has been prepared before the lesson. The preparation took about ten minutes.

After five minutes, representatives from the groups are invited to the board to choose sports and the appropriate training methods for them. Discussion then follows about why sports and methods have been chosen, why they have been grouped together and the benefits those training methods will confer. Any missing points will hopefully be drawn out. Some words may be used twice.

The teacher can manage this task as a game, allowing successful pupils to choose the next pupil to come to the board.

Being able to move words on screen allows pupils to test ideas – the word can always be moved back if it is wrong. This helps to promote discussion in the classroom. Teacher and pupils can also add annotations over the top of the page, as seen in other examples.

This task could be achieved with traditional methods, using card and sticky tape. However, if it were to be reused, it would have to be stored. The digital version is a flexible resource that can be stored on a computer, shared electronically with colleagues and quickly altered to suit different classes. It can be displayed in seconds, helping to maintain the pace of the lesson. This activity can be used in a variety of contexts – different pitch sizes, rules, equipment etc – for a variety of sports.
Interactive whiteboards have paved the way for a host of interactive technologies in the classroom. Some of these require an interactive whiteboard in order to work, some complement an interactive whiteboard, and others can work with just a computer and a projector.

**Slate or graphics tablet**

This wireless piece of equipment, which is about the same size as an A4 pad of paper, allows an interactive whiteboard to be controlled from anywhere in the room. This is done by the teacher or pupil holding the slate and using a special pen on it. The cursor on the board moves in line with the movements on the slate.

The tablet has advantages for classroom management, as the teacher can be situated anywhere in the classroom and still control all the functions of the board. In addition, the slate allows pupils who do not want to come to the board, or who are not physically able to do so, to participate fully in lessons.
Remote keyboards
Teachers or pupils can enter text onto the computer from anywhere in the classroom when using the remote keyboard. The keyboard works wirelessly with the computer, with any text typed being displayed on the interactive whiteboard. This is useful for shared writing activities or for a pupil to make notes directly onto the interactive whiteboard during class discussion.

Remote mouse
All the actions of a computer mouse can be carried out from any position in the classroom by this wireless device, also often known as a gyromouse.

Rather than moving over the surface of a desk, the remote mouse can be moved through the air to control what is happening on the screen. The remote mouse can be used from anywhere in the room.

Tablet PC
Using wireless connections to transmit data to a projector, the tablet PC can be used freely from anywhere in the room. Tests are currently being carried out to assess the value of using tablet PCs in this setting through the DfES Testbed project.

Voting devices
Voting devices allow teachers to ask pupils to vote electronically on questions. These could be multiple choice questions, with several options to choose from, or pupils could be asked to express an opinion across a range of answers (eg from A = agree strongly to E = disagree strongly). Some voting devices allow numerical answers to be entered. Teachers can even ask pupils if they understand or are if they are ready to move on. As pupils vote anonymously, they are less likely to be afraid to admit that they would like more time on a section of work.

Results from the vote are displayed immediately on the interactive whiteboard, allowing for immediate feedback on questions. Some software allows for detailed analysis of the results in order to offer more support to pupils who are scoring below the expected levels.

Digitizer
A digitizer is rather like an overhead projector that can enlarge opaque objects. It allows any small object to be enlarged and displayed on an interactive whiteboard. A teacher could, for example, open a book and place it on the digitizer. The page of the book would be displayed clearly on the board. Using the right software, images can then be annotated or saved.

Video conferencing technology
A computer with a webcam offers the possibility of video conferencing during lessons. Links can be established with people outside the
classroom and live streaming video displayed on the interactive whiteboard. Video conferencing technology enables ‘experts’ to contribute to lessons – for example, by linking up the classroom with a specialist who is able to answer pupils’ questions from a laboratory, a museum or overseas. The video link can be recorded and replayed later in the lesson using the interactive whiteboard, to analyse or recall what was said during the interview.

Digital repositories
As the use of digital technology develops, so too will banks of resources that can be searched and downloaded to provide short video or audio clips for lessons. Searching the Internet for material can be time-consuming and ultimately frustrating, so the advent of resources which can be quickly and easily accessed and customised for particular lessons is a welcome development.
Section 6: Further links and references

There is a wide range of further sources of information, advice, resources and other materials available to help you make the most of the interactive whiteboard in supporting learning and teaching.
